Prerequisites

- An activated MyID account is required to use ResNet’s wireless network. If you have not activated your MyID account, you will need an active network connection to do so.

Connecting your Mac to WVU.Encrypted Wireless

- If your MAC is also connected to the wired Ethernet network, disconnect it now. If you do not disconnect from the wired network, the computer may choose to use the wired network instead of the wireless network, and the following steps will not work as expected. If the following steps do not work as expected, simply re-connect the Ethernet cable to your computer to regain your network connection.

1. In the upper right hand corner of your screen click on the Airport Icon. Be sure Wi-Fi: On is active. You may see fewer or more networks than the example here. Ignore them and click “Join Other Network…”

The “Find and join a Wi-Fi network” dialog will open.

2. Fill in the Closed Network dialog with network name WVU.Encrypted, wireless security type WPA2 Enterprise, and your MyID credentials. Click Join.
3. A certificate window may appear. (Only certificates for wvu.edu servers should be accepted.) Click Continue.

4. At this point you should be connected. If you receive an "Authentication Failed" message please be sure that you are using the correct Username and Password.

If you require assistance, please call the Service Desk at (304) 293-4444.
