Browser Checker

The browser checker is a useful tool that aids eCampus users to determine their system compatibility with eCampus. Once a user selects the browser checker link, the page will automatically open a new window and check the users system and provide a detailed display of their system information. If green smiley faces 🧡 are given then the user’s system is compatible with eCampus. If red frowny faces ☹ are given for any of the items on the list then the user needs to change one or more of their settings.

If you receive all green smiley faces then close the window and proceed to login to eCampus. You should not experience any problems due to system compatibility.

If you receive a red frowny face for any of the items, look to the right of the item and you will be provided instructions on ways to fix the issue identified. Once you have made any necessary changes perform the browser check again to make sure all the necessary changes have taken effect.
